

## Adjustable Dead Band Pressure Switches

**The adjustable dead band** pressure switch should be used when there is a requirement for an adjustable and wide dead band between the increasing and decreasing set points.

### Function

Alarm: Hi — Lo  
Control: On — Off

**V3 Weathertight  
Explosion Proof  
Hermetically Sealed Switches**

**V1 Weathertight Housing**

*Design and specifications are subject to change without notice. For latest revision, see [www.sorinc.com](http://www.sorinc.com).*

### Features and Benefits

- 3-year warranty from date of manufacture
- **Safety Certified to IEC 61508 (SIL)** SOR products are certified to IEC 61508 for non-redundant use in SIL1 and SIL2 Safety Instrumented Systems for most models. For more details or values applicable to a specific product, see the Safety Integrity Level Quick Guide (Form 1528).
- Wide adjustable dead band
- Independent adjustments for increasing and decreasing Set Points
- Field adjustable with fine resolution of Set Points
- Instrument quality — high repeatability
- High overrange and proof pressures
- Exceptionally long life
- Not critical to vibration
- Wide selection of wetted parts materials for process compatibility and containment

# Adjustable Dead Band Pressure Switches

## Principles of Operation

The SOR Adjustable Dead Band pressure switch incorporates two industry proven Static “O” Ring pressure sensing elements. Media pressure on the areas of the pistons counteracts the forces of the range springs — each adjustable by a separate adjusting nut — and moves the piston shafts to operate the lever assembly which, in turn, actuates and deactuates the electrical switching element. Each pressure sensing element of the Adjustable Dead Band pressure switch is a force balance piston-actuated assembly sealed by a flexible diaphragm and an o-ring that is static. The only wetted parts are the single pressure port, two diaphragms, and two o-rings all indicated with asterisks (\*) in this illustration.

## Principle Schematic

The lever assembly travel illustrated here has been exaggerated for clarity.

No Pressure: Electrical switching element is deactuated.

Pressure greater than decreasing Set Point but less than increasing Set Point. Electrical switching element remains deactuated.

### Actuation

Pressure equal to or greater than increasing Set Point: Electrical switching element is actuated.

Pressure less than increasing Set Point but greater than decreasing Set Point: Electrical switching element remains actuated.

### Deactuation

Pressure equal to or less than decreasing Set Point: Electrical switching element is deactuated.

# Adjustable Dead Band Pressure Switches

## How to Order

Here is the SOR quick select model number trees that provide you with all the options to configure and order a product for your application.

- You must select a designator for each component.
- Reference tables, charts and additional information is provided throughout the catalog to help you make your selections. See pages noted in the tree.

If Agency Approved, Certified or Listed pressure switches are required, see page 10 for components that must be specified.

# Adjustable Dead Band Pressure Switches

## Step 1 & 4: Piston/Spring

5V1-LA3-N6-C1A-YY

Six adjustable dead band ranges are available. Each adjustable range is displayed on a grid (pages 5 and 6). Determine the correct adjustable range for the application by checking increasing and decreasing Set Point requirements against the tables. In the example below, a contact closure is required when pressure increases to 160 psi. The same contact must open when pressure decreases to 60 psi. Since 60 psi is within the blue field, the example grid range is correct for the application.

When the correct range grid is selected, insert range designators ① and ④ from that grid into the model number.

### Step 1

Find the specified increasing Set Point at the top of the graph.

### Step 2

Find the specified decreasing Set Point along the left edge of the graph.

### Step 3

Following the vertical line down from the increasing Set Point. Follow the horizontal line across from the decreasing Set Point. Any point within the blue field is acceptable.

1st and 4th places in model number

# Adjustable Dead Band Pressure Switches

## Step 1 & 4: Piston/Spring

5V1-LA3-N6-C1A-YY

## Step 2: Housing

5V1-LA3-N6-C1A-YY

Service	Description	Designator
<b>Non-Hazardous Locations</b>	<p>Weathertight for non-hazardous service. NEMA 4, 4X &amp; IP65 Electrical conduit connection: 3/4" NPT(F) Material: 356 aluminum Use LA switching element and terminal block. Shipping weight: 4 pounds (2 kgs) See cutaway view on page 2; dimensions on page 14.</p> 	V1
<b>Hazardous Locations</b> (UL Listed/CSA Certified, ATEX and SAA Approved Snap Switch)	<p>Explosion proof and weathertight. NEMA 4, 4X &amp; IP65. Class I, Group A, B, C, D; Class II, Group E, F, G; Division 1 &amp; 2 Electrical conduit connection: 3/4" NPT(F) Material: 356 aluminum Use AG switching element; hermetically sealed SS capsule Shipping weight: 5 pounds (2.5 kgs)</p> 	V3

# Adjustable Dead Band Pressure Switches

## Step 3: Switching Element

5V1-LA3-N6-C1A-YY

Switching Element Service	Contact Form	Electrical Connection Type	AC Rating		DC Rating Resistive				Maximum Ambient Temperature		Designator	
			Volts	Amps	Volts	Amps	Volts	Amps	Deg F	Deg C	SPDT	DPDT
Normal Service AC	SPDT	Screw Terminal Block	250	15	125	.5	30	10*	180	80	LA	N/A
AC or DC	DPDT	18" 18 AWG color-coded wire leads 3/4" NPT(M) conduit connection	250	11	125	.5*	30	5.0	160	70	N/A	AG

1. The switching elements shown above are UL Listed and CSA Certified. The DC current rating marked (\*) is not UL Listed but has been verified by testing and/or experienced.
2. The hermetically sealed switching element capsule is UL Listed, CSA Certified and SAA Approved as a snap switch in accordance with the following table.
3. Consult the factory for availability of SAA Approved units.

Agency	Hazardous Location Conditions	Designator
UL Listed	Class I, Group A, B, C, D; Class II, Group E, F, G; Division 1 & 2	AG
CSA Certified		
SAA <sup>Note 3</sup> Approved	Ex s Zone 2 IIC T4 IP65 Ex tD A22 T105 °C IP65	
ATEX Approved	II 2 G EEx m II	

# Adjustable Dead Band Pressure Switches

## Step 5: Diaphragm & O-Ring

5V1-LA3-N6-C1A-YY

### Notes

1. N4 diaphragm system is standard. It is normally suitable for air, oil, water and non-corrosive processes.
2. Other diaphragm and o-ring combinations may be available. Consult the factory or the SOR representative in your area for more information.
3. Wetted parts have been selected as representing the most suitable commercially available material for use in the service intended. However, they do not constitute a guarantee against corrosion or permeation, since processes vary from plant to plant and concentration of harmful fluids, gases or solids vary from time to time in a given process. Empirical experience by users should be the final guide. Alternate materials based on this are generally available.
4. Specify N3 diaphragm system for high cycle rate, high shock applications where Buna-N and TCP are compatible with the process.
5. This table shows allowable minimum and maximum temperature for o-rings.

O-Ring Material	° F	° C
Viton	32 to 400	0 to 204
Viton GLT	-20 to 400	-29 to 204
Kalrez*	5 to 400	-15 to 204
Aflas	25 to 400	-4 to 204
Buna-N Neoprene EPR	-30 to 200	-34 to 93
TCP Teflon Coated Polyimide Diaphragm	-30 to 400	-34 to 204
*Kalrez or equivalent Perfluoroelastomer (FFKM) o-rings		

6. M9 diaphragm system is suggested for steam applications up to 400°F.
7. Dead bands are slightly higher when using H, J, W, N3, or N6 series diaphragm options. Consult the factory.

O-Ring (Wetted)	Diaphragm (Wetted)	Designator
Viton	Monel	A4
Kalrez		A6

## Step 6: Pressure Port

5V1-LA3-N6-C1A-YY

Material	Connection	Designator
Aluminum Alloy 356 copper-free casting	1/4" NPT(F)	B1A
	1/2" NPT(F)	B2A
316SS CF-8M Casting	1/4" NPT(F)	C1A
	1/2" NPT(F)	C2A

## Step 7: Accessories

5V1-LA3-N6-C1A-YY

Accessory / Option & Description	Designator
Wetted parts are cleaned for industrial oxygen service.	BB
CSA Certified pressure switch. Available with V1 housing. Housing has earth (ground) lug. See agency listings on page 10 for details.	CS
Cemented cover gasket on weathertight housing.	GC
Universal terminal box, 1/2" NPT(F). 316SS. Explosion proof. FM Approved; CSA Certified. See form 657 (Catalog GI-30).	HT
Vacuum protector plate retains diaphragm system in the pressure switch if subjected to intermittent vacuum greater than 10 in Hg. If a pressure switch is subjected to continuous, rapid changes of vacuum, other protection may be available (consult factory). Material matches or exceeds pressure port material.	MM
Compliance to NACE Certification MR0175/ISO 15156*	NC
Pipe (stanchion) mounting kit for (1-1/2" to 2" pipe). Order as a separate line item for CSA Certified pressure switches.	PK
Tag, fiber. Attached with plastic wire to housing. Stamped with customer-specified tagging information.	PP
Powder coat epoxy coating. No coating on stainless steel parts or plated screws. (500 hours-salt spray)	PY
Tag, stainless steel. Attached with stainless steel wire to housing. Stamped with customer specified tagging information. (2 lines, 18 characters and spaces per line.)	RR
Stainless steel piston and cylinder disc for corrosion resistance. (Standard on number 9 piston)	SP
Explosion proof and weathertight electrical junction box with screw terminals. Aluminum 3/4" NPT(F) top or right conduit connections as required. UL Listed and CSA Certified Class I, Groups A, B, C & D; Class II, Group E, F & G; Division 1 & 2. Includes cover o-ring for weathertight applications. (V3 housing only.)	TB
Oversize stainless steel nameplate. Permanently attached to housing. Stamped with customer specified tagging information	TT
Fungicidal varnish. Covers exterior and interior except working parts.	VV
Epoxy coating. Exterior only. Polyimide epoxy with 316SS pigment. (200 hours-salt spray)	YY
Chained cover with captive screws to conform to former JIC specification	ZZ
"X" is used as a suffix to the model number for special requirements not keyed elsewhere in the model number by an "X". Each "X" must be completely identified in the text of the order or inquiry. When more than one "X" is required, use "X" followed by the number of such items. For example, "X3" means three separate, otherwise unidentifiable requirements.	X

## Agency Listings

The following combinations only are available as approved, certified or listed by the agencies shown. Some components are for products not offered in this catalog. Certain components or combinations may acquire additional approval, certification or listing between print dates of this catalog. Contact the factory for the most current information.

### CSA Enclosure 4 (Weathertight)

Piston	Housing	Switching Element	Spring	Diaphragm & O-Ring	Pressure Port Material & Connection Size	Accessories/Option
All	V1	LA	All	All	All	CS Required All except TB

SOR recognizes that there is no industry convention with respect to terminology and definitions pertinent to pressure switches. This glossary applies to SOR Pressure Switches.

### Adjustable Range

The span of pressure between upper and lower limits within which the pressure switch may be adjusted to actuate/deactuate.

### Dead Band

The difference in pressure between the increasing Set Point and decreasing Set Point.

### Decreasing Set Point

That discrete pressure at which the pressure switch is adjusted to deactuate on falling pressure. It must fall within the adjustable range.

### Hermetically Sealed

A welded steel capsule with glass-to-metal, factory-sealed, electrical leads that isolates the electrical switching element(s) from the environment.

### Increasing Set Point

That discrete pressure at which the pressure switch is adjusted to actuate on rising pressure. It must fall within the adjustable range.

### Overrange

The maximum input pressure that may be continuously applied to the pressure switch without causing permanent change of Set Point, leakage or material failure.

### Pressure Switch

A bi-stable electromechanical device that actuates/deactuates one or more electrical switching element(s) at a predetermined discrete pressure/vacuum (Set Point) upon rising or falling pressure/vacuum.

### Proof Pressure

The maximum input pressure that may be continuously applied to the pressure switch without causing leakage or catastrophic material failure. Permanent change of Set Point may occur, or destruction of the device may be rendered inoperative.

### Repeatability

The ability of a pressure switch to successively operate at a Set Point that is approached from a starting point in the same direction and returns to the starting point over three consecutive cycles to establish a pressure profile. The closeness of the measured Set Point values is normally expressed as a percentage of full scale (maximum adjustable range pressure).

### SPDT Switching Element

Single-Pole, Double Throw (SPDT) has three connections: C — Common, NO — Normally Open and NC — Normally Closed, which allows the switching element to be electrically connected to the circuit in either NO or NC state.

### DPDT Switching Element

DPDT is two synchronized SPDT switching elements which actuate together at increasing Set Point and deactuate together at decreasing Set Point. Discrete SPDT switching elements allow two independent circuits to be switched; i.e., one AC and one DC.

The synchronization linkage is factory set, and is not field adjustable. Synchronization is verified by connecting test lamps to the switching elements and observing them go “On” simultaneously at actuation and “Off” simultaneously at deactuation.
