

The SENSOR Basic Bottle Sampling System (BBSS) is designed for safe and reliable closed-loop "grab" sampling of liquids at process pressures less than 150 psig (10 bar). The SENSOR sample valve is designed to operate under continuous flow via a bypass or parallel line off the main process piping. With inclusion of the optional Needle Evacuation System (NES), the BBSS provides for for complete removal of sampling residue from the ID of the Process Needle, therefore preventing plugging and cross-contamination between sampling operations.

Features and Benefits

- Highly customizable based on process conditions and operator requirements
- Primary Flow-Thru Sample Valve features a side-ported needle valve with packing below the threads; ensuring that the stem will not seize due to process build up.
- Side-ported Vent Needle prevents plugging of vent port
- 316L standard material; other materials available
- Replaceable Process and Vent Needles
- Non-metallic bottle shroud protects operator in case of shattered bottle
- · Operation and Installation Manual for each system

Materials of Construction

Sample Loop 316L Stainless Steel
Sample Valve 316L; 1/2" flow port
Process Needle 316SS; .083" - .148" OD

Vent Needle 316SS; .083" OD

O-Ring Material Viton standard; optional Kalrez

Seal Material Teflon

Bottle Shroud PVC; 2 oz. - 32 oz. Retaining Strap Stainless Steel Mounting Plate Stainless Steel

Operating Pressure 150 psig maximum recommended pressure when sampling;

sample valve and system rated to 2000 psig

Operating Temperature 135°F maximum without cooler;

800°F maximum with cooler and graphoil valve packing

Optional Equipment

SENSOR Needle

Evacuation System (NES) Includes check valve, regulator, rotameter, pressure gauge, and block valve

Emissions Filter Canister with activated carbon for use when no vent to flare is available;

also available with indication crystals which change color to indicate

saturated filter media

Isolation Valves Isolation valves on sample inlet & outlet to allow for easy serviceability

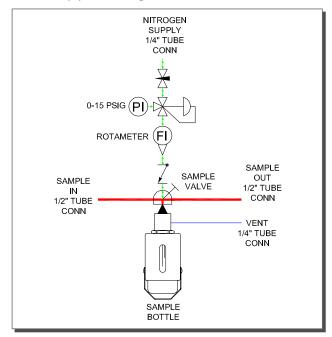

Sample Coolers For use when process temperature exceeds 135°F

Secondary Block Valve Complies with double-block safety requirements

Enclosures Stainless steel enclosures, available uninsulated or insulated and with steam

or electric heater elements; other enclosure materials available

Mounting 2" X 60" pipe stand, galvanized

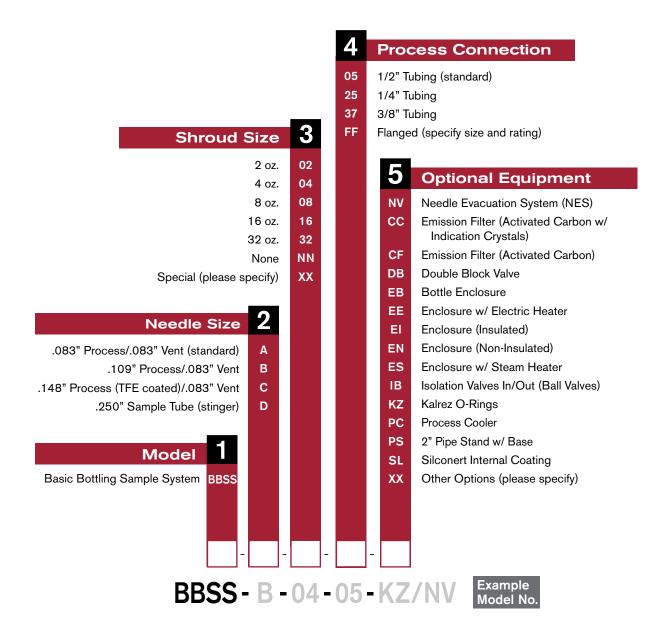

Shown with optional Needle Evacuation System (NES).

Below is the quick select model number tree that provides you with all the options to configure and order a sampling system for your application.

- You must select a designator for each component
- You must supply a completed Application Data Sheet shown on pages 4 and 5

Bottle System Application Data Sheet

COMMENTS	

Sampling Systems at SENSOReng.com

BBSS

Basic Bottle Sampling System

- Simple, flow-thru valve design
- Zero dead volume
- Replaceable process and vent needles
- Available with SENSOR Needle Evacuation System (NES)

LGSS & VSS

Liquefied & Vapor Gas Sampling Systems

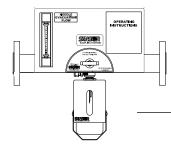

- · Safe, simple methodology for sampling high pressure liquefied gases and process gases
- · Single handle operation
- Panel mounted pressure gauge
- Sight glass ensures safe cylinder outage on LGSS
- Ability to depressurize quick connects before removing cylinder

PIBSS

Pressure Isolating Bottle Sampling System

- Guarantees repeatable sample volume
- Zero dead volume
- Replaceable process and vent needles
- Suitable for high process pressures
- SENSOR Needle Evacuation System (NES) standard

ISS

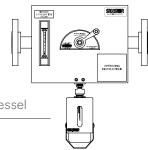

Inline Sampling System

- · Available in wide variety of piping materials and end connections
- Suitable for high temperature, high viscosity service
- · Available with open tube "stinger" or process needle

RSS

RAM Sampling System

- Available in wide variety of piping materials and end connections
- · Suitable for high temperature, high viscosity service
- Available with open tube "stinger" or process needle
- Can be provided with a variety of connections to mate up to existing piping or vessel
