

Need to modify or upgrade Nuclear components?

SOR® has it covered.

SOR provides special modifications for safety related applications. SOR can modify or design products to fit your specific needs - whatever the process application, safety concerns, or environmental demands.

One of our best selling features is the ceramic terminal block. It is available for pressure, vacuum, temperature, and differential pressure switches with RT housing. Our terminal block features no external wire leads, so installation is quick and simple:

- ▶ No wire leads for reduced installation costs
- ▶ Flexibility of use with SPDT and DPDT switching elements
- ▶ Seismic and environmentally qualified
